

### *Ayrshire Canada and Lactanet to Collaborate More Closely*

*One important aspect of the Ayrshire breed's promotion is to focus on its competitiveness and our capacity to maximize its performance. Ayrshire Canada has no information on your individual management performances, such as calving interval, transition cow index, lactation curve, etc. Yet, these are essential data which can rapidly increase your profitability. In response, Ayrshire Canada has decided to collaborate more closely with Lactanet in order to reach our objective of improving our breed's performance.*

*Lactanet has a team of Strategic Advisors specialized in all aspects of herd management. As such, we will be able to quickly identify areas for improvement, help guide your interventions, and estimate your profits in dollars. You could also receive financial support by Réseau Agriconseils. So we invite you to communicate with us as soon as possible! And don't be surprised to see us "dropping in" soon to offer you these services.*

***Investing in your future to improve Ayrshire herds' profitability:  
this is our Association's objective !***

## ***2018 Herd Averages***

### ***The 2018 Best Canadian Production Average Emanates from the Des Appalaches Ayrshire Club***

*The Ferme Bellevue Du Lac SENC ranked 1st in Canada with a Composite BCA Average of 293.7 and, more precisely, 10,411 kg of milk at 4.17% fat (434 kg) and 3.31% protein (345 kg). Crowned Master Breeder in 2014, this herd distinguishes itself by its performance both at shows and in the barn. Read more on this herd in the next issue of the Canadian Ayrshire Review, coming soon to your home.*

## ***The Cow Feeding Research Project Continues***

*The second phase of the cow feeding research project has begun at Agriculture Canada's Research and Development Centre in Lennoxville, Québec. Despite a few weeks' delay, the experiment will be conducted with the 18 Ayrshire cows which we selected and introduced in the herd. These cows will now be monitored rigorously and tested based on the different rations collected on participating farms.*

*From the very beginning of this project, breeders' collaboration had been guaranteed. This commitment greatly contributed to this research project's acceptance and funding. Considering the importance of this project's success and to ensure that none of the participating breeders get shortchanged, **Ayrshire Canada** has set aside a specific amount to help reimburse, if needed, some expenses which could be incurred by these farms.*

TRAITEMENT DU FUMIER

# BACTZYME

ACCÉLÈRE LA DÉCOMPOSITION    AUGMENTE LA VALEUR FERTILISANTE    RÉDUIT LES ODEURS

« Avant c'était vraiment difficile de brasser ma fosse. Maintenant, avec BactZyme, ça me prend la moitié moins de temps ! »

J'économise sur le diesel, ça ménage la machinerie et, un gros plus, les voisins trouvent que ça sent moins fort ! »

Simon Proulx  
Ferme Adelme Proulx et fils  
Saint-Anaclet, Bas-Saint-Laurent

## QU'EST-CE QUE BACTZYME ?

BactZyme est un mélange naturel de bactéries et de nutriments. Appliqué dans les fosses à fumier liquide, il libère des enzymes qui facilitent le processus de décomposition naturel des déchets solides. Ces enzymes et nutriments écologiques permettent d'accélérer l'activité biologique naturelle et le processus de décomposition.
